Dear Aditya Kaushal,

I am excited to submit my application for the Principal Architect role at Ecolab. As a current Ecolab employee and technology leader, I bring both deep institutional knowledge and 15+ years of experience designing cloud-native platforms, distributed systems, and enterprise-scale Azure solutions. In my current role, I define and govern cloud solution architecture across REST APIs, Azure Service Bus, Azure Functions, Web Apps, and microservices patterns while translating business and product priorities into scalable technical roadmaps for Ecolab3D and related enterprise platforms.

My experience at Ecolab has given me a strong understanding of our product landscape, engineering practices, stakeholder needs, and opportunities to strengthen architectural consistency across teams. I have led design reviews, established system boundaries, shaped implementation roadmaps, and guided teams through decisions involving scalability, reliability, maintainability, API strategy, data modeling, CI/CD, and DevOps practices. I also architected and launched an enterprise documentation platform using DocFX that was adopted by more than 745 internal users, creating documentation-as-code standards that improved knowledge architecture and long-term engineering execution.

I would welcome the opportunity to expand my impact at Ecolab as a Principal Architect by helping scale resilient platforms, strengthen architecture governance, modernize engineering practices, and connect technical strategy with measurable business outcomes. Thank you for your time and consideration.

Sincerely,
Jason Kryst
